## Course Description:

Our environmental circumstances pose problems of value and choice for each of us and challenge us to reconsider the way we act individually and collectively in an ever changing ecosystem. Whether we like it or not there is no escaping the fact that ethical values are embedded in the premises and assumptions of all decisions we make concerning land and resource use.

Responsible land management has come to include concern for land as habitat -- not just for humankind alone -- but for other communities of species that inhabit it as well. In addition, we have come to understand that land management needs to reflect an understanding of the land in its ecological context, including its local and larger significance in the hydrological cycle, the carbon cycle, public health, etc.

This course invites students to reflect upon the problems confronting those who have to make decisions about land management and resource use. It highlights different approaches to environmental ethics and examines the underlying assumptions of the scientific, managerial, economic, aesthetic, religious, judicial and public policy discourse on the environment.

The course invites students to...

# Environmental Information Center

The Environmental Information Center provides Harvard affiliates with access to and assistance in using environment-related books, journals, government documents, indexes, databases, and other resources across the university libraries. Topics range across the social sciences, policy studies, physical sciences, and humanities. Questions are not restricted to environment topics *per se*, but may include lines of environmental inquiry such as demographics, development, geography, regulations, water resources, natural and environmental hazards, energy, health, industry, conflict, social vulnerability, and so on. for information about related collections see [Environmental Science and Public Policy Archives](#).

For assistance, please schedule a data research consultation by contacting George E. Clark, the Environmental Resources Librarian, via [e-mail](#), by phone at 617-496-6158, or by fax at 617-496-5570. Appointments are required for both individual and group research consultations. It is possible to arrange to hold a consultation in either Cabot Library or Government Documents/Microforms (in Lamont Library), as well as in Littauer.

### Week 1

#### *Introduction to Course*

If you are enrolled to take this course, please fill out the [Student Information Form](#) for the course.

When you have completed the form, check your computer configurations to make sure that you have installed on your computer a [RealPlayer](#) to be able to hear and view streaming media files. In addition you will need to install an [Adobe Acrobat Reader](#) in order to read PDF (Portable Document Files).

You can obtain free copies of these software programs by clicking on the following icons and following the instructions for downloading and installation.
